

# BRIQUETTING MACHINE Y85-50,80,130

**Engineered for continuous industrial duty, the Y85 series is designed to compact metal chips into uniform, high-density briquettes.**

Equipped with a PLC-based control system, advanced parameter tuning, and intelligent feed monitoring, the machine ensures optimal process stability, high operational efficiency, and reduced operating costs.

The integrated coolant recovery and recirculation unit maximizes fluid reuse and improves overall process performance, fully aligning with circular-economy principles.

- **Significant reduction in chip volume**
- **Efficient coolant recovery**, lowering consumption and disposal costs
- **High-density briquettes** that streamline handling, transport, and storage
- **Enhanced material valorization** for downstream processes
